REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The prior art taken alone or in combination fails to teach or suggest the limitations or a combination thereof or at least the step of “matching the at least one incentive to at least one of a plurality of financial institution customers based on the financial range ranking for each of the plurality of financial institution customers associated with the at least one of the plurality of

decile levels matched to the at least one incentive”, as recited in at least independent claims 1, 70 and 74. Hence, claims 1 and 57-74 are said to be patentable over the prior art.

For example,

WO 97/26061 to Goldberg discloses a system that stores users' demographic profiles, which, in one embodiment, has a data structure substantially identical to a **user** profile data structure. Such **demographic** profiles may have a variable length section for specifying requested values for user information items that may be provided in (potentially only a relatively small number of) **user** profiles. In some embodiments, a **demographic** profile includes a reference to the advertiser's or sponsor's identity, a reference to... substantially irrelevant to the advertiser or sponsor. Accordingly, regardless of the particular embodiment of the **demographic** profiles,, the **users"** **demographic** profiles are used to match (i.e., select) one or more corresponding advertising presentations with a particular target **group of users** that, presumably, are likely to purchase the product and/or service portrayed in such advertising... ..such advertising presentations may be provided to only users who are likely to be subsequent **customers**, advertisers and/or sponsors may provide to these **users** specifically **targeted** advertising having relatively expensive **promotionals**, such as product or service discounts, free samples, or a trial usage and so forth.

USP 5, 945, 953 to Walker discloses a system and process for establishing a function having a corresponding function identifier. The function is adapted to be processed during a transaction such as a point-of-sale transaction that may involve a credit card. The system and process involve identifying an account having an account identifier, establishing a function having a function identifier, and receiving a transaction request including the account identifier,

a transaction amount, and the function identifier. The system and process also process the transaction in accordance with the function to affect the transaction and, possibly, the transaction amount. An affect on the account is also contemplated. Additionally, the system and process are adapted to allow message to be presented by customers and credit card holders during a transaction for later appearance on a credit card statement or other notice (See abstract).

USP 5,857,175 to Day discloses a system (10) that makes use of computer (12), which includes database containing **customer account** information and special offers. The **special** offer includes at least one **targeted** offer which is presented to selected **customer accounts** on basis of targeting parameters. Several **customer** cards with machine readable card information indicates identification of card with particular **customer account**. A **customer** interface, in communication with computer, transfers data. A card reader in interface reads machine readable card information from the **customer** card. A customized **customer** offer list available to particular **customer account**, is generated. An offer communicator communicates customer offer list to generated customer. A check-out with card reader for reading customer card presents purchased item information indicating items purchased by customer. Information from customized customer offer list is sent to one check-out. Customer purchase information, which indicates purchased items via check-out, is collected. **Customer account** information is edited to reflect items purchased by **customer**. Categories of products are defined and provided, thereby permitting special offer for one brand of product per category.

In an article, "UK: INNOVATIVE EXPERIMENT BY AMERICAN EXPRESS" published in the Sunday Times (ST) on 15 April, 1996, it is described that American Express (Amex) has conducted tests since July 1995 in Britain in order to target its customers with

special offers, which are designed to match buying habits of the cardholders. The company, using a technique known as micro-marketing and thanks to specifically designed computer models, sends a different page of offers to each cardholder to maximize the percentage of response to promotions. The early results of the experiment have shown for instance that the percentage of response for a car rental offer increased to 9.32% when the offer was sent to specific cardholders compared with 0.06% when it was sent to cardholders who did not have customized statements. Amex expects to satisfy better its two sets of customers, its cardholders and its merchants, thanks to this innovation.
